♂ Male29003 | 🌐 Personal Portfolio

Summary

I am currently specializing in building web interfaces using **React.js** and **TailwindCSS**. I am also learning **Express.js** to understand backend logic and **React Native** to develop mobile applications.

My **short-term goal** is to work as a Frontend Developer and contribute effectively to the company's projects. In the next 3-4 years, I aim to become a solid **Software Engineer** and eventually step into a **Project Management** role.

Education

Sai Gon University (SGU)

09/2021 – 03/2026

Degree: Engineer's Degree in Software Engineering

GPA: 3.21/4.0

Certifications

TOEIC 4 Skills Certificate

12/2025 - 12/2027

Proficient in English Reading, Listening, Speaking, and Writing.

Score: 905/990 (R&L), 350/400 (S&W)

Technical Skills

Programming Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, C++, Python, SQL.

Frontend: React.js, TailwindCSS, Bootstrap.

Backend: Node.js (Express), Django (Basic), RESTful API.

Tools & DB: Git, GitHub, Figma, Postman, VS Code, MySQL, PostgreSQL.

Intern / Training

T_BLUE SKY CO., LTD

06/2025 – 09/2025

IT Support

- Managed the company's E-commerce Admin Dashboard (CMS).
- Identified and reported UI/UX issues on the live website to the development team for improvements.
- Gained practical experience in how an E-commerce system operates from data entry to UI display.

Projects

Music Streaming Platform (Spotify Clone)

10/2025 - Present

🔗 Source Code | 🌐 Link to Web | 👤 Admin Portal

- **Description:** A decoupled music streaming platform comprising two independent React SPAs (Client App & Admin Portal) powered by a central Django REST API.
- **Tech Stack:** React.js, TailwindCSS, Zustand, Django, Redis, Cloudflare R2.
- **Technical Implementations:**
 - **Frontend Architecture (React.js & TailwindCSS):** Separated Client and Admin into two distinct SPAs to optimize bundle size and security. Built responsive interfaces featuring draggable media carousels, Skeleton loading states, and reusable data tables.
 - **State Management (Zustand):** Developed a robust Custom Audio Player with global state control to seamlessly manage playback queues, current tracks, and audio synchronization.
 - **Backend & Caching (Django & Redis):** Engineered the core RESTful APIs and utilized Redis caching to efficiently handle decrypted audio chunks and optimize user authentication.
 - **Cloud Integration (Cloudflare R2):** Built a synchronized lyrics engine by securely fetching and parsing .lrc files while configuring and managing CORS policies.
