♂ Male29003 | 🌐 Personal Portfolio

Summary

I am currently specializing in building web interfaces using **React.js** and **TailwindCSS**. I am also learning **Express.js** to understand backend logic and **React Native** to develop mobile applications.

My **short-term goal** is to work as a Frontend Developer and contribute effectively to the company's projects. In the next 3-4 years, I aim to become a solid **Software Engineer** and eventually step into a **Project Management** role.

Education

Sai Gon University (SGU) 09/2021 – 03/2026
Degree: Engineer's Degree in Software Engineering
GPA: 3.21/4.0

Certifications

TOEIC 4 Skills 12/2025 - 12/2027
Score: 905/990 (R&L), 340/400 (S&W)

Technical Skills

Programming Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python, SQL.

Frontend: React.js, Angular, TailwindCSS, Bootstrap.

Backend: Node.js (Express), RESTful API.

Tools & DB: Git, GitHub, Figma, Postman, VS Code, MySQL, PostgreSQL.

Intern / Training

T_BLUE SKY CO., LTD 06/2025 – 09/2025

IT Support

- Managed the company's E-commerce Admin Dashboard (CMS).
- Identified and reported UI/UX issues on the live website to the development team for improvements.
- Gained practical experience in how an E-commerce system operates from data entry to UI display.

Projects

Personal Finance Management (FinFlow) 05/2026

🔗 Source Code | 🌐 Live Demo

- **Description:** Developed the complete Frontend interface for a personal finance management application, integrating seamlessly with a pre-existing .NET 8 backend.
- **Tech Stack:** Angular 17, TypeScript, SCSS, Chart.js, SignalR.
- **Frontend Implementations:**
 - **Modern Architecture:** Developed a fully responsive SPA utilizing **Angular 17 Standalone Components** and **Signals** for optimized, fine-grained state management.
 - **UI/UX Excellence:** Engineered an intuitive interface featuring seamless **Dark/Light theme** toggling, custom **Skeleton loading** animations, and interactive financial data visualization using **Chart.js**.
 - **Real-time Sync:** Integrated **SignalR** on the client side to instantly reflect transaction updates and balance recalculations across sessions without page reloads.
 - **API Integration:** Consumed pre-built RESTful **.NET 8** APIs, implementing secure JWT authentication flows, global HTTP interceptors, and custom error handling modules.

Music Streaming Platform (Spotify Clone) 03/2026 - 05/2026

🔗 Source Code | 🌐 Link to Web | 👤 Admin Portal

- **Description:** A decoupled music streaming platform comprising two independent React SPAs (Client App & Admin Portal) powered by a central Django REST API.
- **Tech Stack:** React.js, TailwindCSS, Zustand, Django, Redis, Cloudflare R2.

- **Technical Implementations:**

- **Frontend Architecture (React.js & TailwindCSS):** Separated Client and Admin into two distinct SPAs to optimize bundle size and security. Built responsive interfaces featuring draggable media carousels, Skeleton loading states, and reusable data tables.
- **State Management (Zustand):** Developed a robust Custom Audio Player with global state control to seamlessly manage playback queues, current tracks, and audio synchronization.
- **Backend & Caching (Django & Redis):** Engineered the core RESTful APIs and utilized Redis caching to efficiently handle decrypted audio chunks and optimize user authentication.
- **Cloud Integration (Cloudflare R2):** Built a synchronized lyrics engine by securely fetching and parsing .lrc files while configuring and managing CORS policies.
